## Features

This iView allows the user to fully access the icoya OpenContent content management system. icoya OpenContent allows the easy creation of complex Internet presences within a matter of minutes and this without any programming skills. Complicated navigational structures, like links, overviews, or menus are generated automatically.

Publishing content with or without time-constrained publishing scenarios is possible as well as offering personalized web pages and secure areas. The integrated roles and rights managing system and the goal oriented workflow engine provide the necessary tools to easily distribute tasks within teams, optimizing the content creation process enormously.

Key features are:

- Highly secure Single-Sign-On using SAP logon tickets, no user-mapping is required
- user-management with rights allocation integrated in the LDAP server used by the SAP Enterprise Portal
- Complete functionality of icoya OpenContent within the SAP Enterprise Portal
- a browser-based WYSIWYG-Editor
- an integrated media management for pictures and multimedia files
- time-constrained publishing of content and documents
- automatic generation of menus, document lists, and sitemap
- a team-based workflow with automatic notifications, acquiring, and releasing resources
- user-management with rights allocation integrated in the LDAP server used by the SAP Enterprise Portal

- 
- full support for Novel eDirectory and Microsoft Active Directory Services
  - extensively scalable
  - WebDAV access to content stored in icoya OpenContent. This allows the indexing of documents via TREX.
  - Full integration of SAP Enterprise Portal Repository Manager

## **Prerequisites**
